Dear Dr Lacombe,

Thank you for your letter of 6 November 1998. Yes, it is a long time since we last corresponded. I have been retired from the University of Sydney for eight years now, and have not worked on barnacles again since the publication of my book in 1994.

I am pleased to hear that you have been able to continue with your barnacle studies. Your discovery of gregarines in the gut of *E. rhizophorae* is very interesting, and I hope you have great success in further research on this relationship.

My book on Barnacles is still available from the publishers, although it is unfortunately quite expensive, costing more than \$US100. There will also be a mailing charge in addition to the purchase price. If you wish to acquire a copy, you should write to:

Dear Friend mine

Thank you for get me attention.

*I bought your nice book. The Inst. Brasileiro
Cruz get one! About The Gregarines, now
it is in Santo Domingo, with my first
friend Dra Sophie Jackson, and
perhaps we can published in
Invertebrate Biology. When you have*

*reprint, contact & send your my
teacher. Do you know your
work in Barnacle parasites?*

With my best wishes

Sincerely yours

Anderson
